

Oral Barrier Jalosome®

Class IIb medical device for the treatment of oral mucositis.

Area of use:

- Mucositis caused by radioand chemotherapy
- Canker sores
- Ulcers
- Recurrent aphthous stomatitis
- Surgical procedures
- Complicated extractions
- Implantology
- Traumatic ulcers from dentures and orthodontic procedures

Oral mucositis is one of the most common side effects following **radio and chemotherapy** in patients with **head and neck cancer**.

The severity and duration of mucositis depend on the radiation source, cumulative dosage, dose intensity, and the volume of irradiated mucosa. Lesions are primarily observed on the mobile oral mucosa, the buccal mucosa, and the lateral and ventral surfaces of the tongue.

Product Description: *Jalosome® Oral Barrier* is a medical device designed to manage the painful symptoms of **oropharyngeal mucositis**. It provides **analgesic action** due to its high mucoadhesive properties, enabling the formation of a protective barrier on the oral mucosa. This **protective film** shields against harmful factors, promoting **lesion healing** while keeping the oral environment hydrated and lubricated.

Thanks to its active ingredients, *Jalosome® Oral Barrier* supports cellular regeneration, rehydrates the damaged mucosa, and provides a soothing effect on painful symptoms.

Ingredients

Hyaluronic Acid:
provides wound-healing and anti-inflammatory effects. Supports cellular repair processes.

Panthenol:
offers high moisturizing properties, reducing inflammation and pain.

Aloe barbadensis (leaf extract):
contains 20% Acemannan, forming a protective barrier on the mucosa and soothing pain associated with mucositis.

Althea Phytocomplex:
creates a protective mucosal barrier that alleviates symptoms and shields against irritation.

**ORAL MUCOSITIS - ANALGESIC ACTION -
RADIO AND CHEMOTHERAPY**
